Introduction

Windows 7, Configuration (70-680) is a foundation level certification which can be the first step in the Microsoft Certification career path. This exam focuses on the installation and configuration of the Windows 7 operating system in an enterprise environment. Windows 7 is currently the dominant desktop operating system in the domain environment. Passing this exam will earn the certification MCTS: Windows 7. Earning this certification will make the candidate more marketable for any support positions involving Windows 7 operating systems. This certification will also be a good addition, if you possess A+ or CCNA certifications.
