Introduction

Virtualization is a standard technology in most IT shops today, and cloud computing based on virtualization is rapidly evolving into the primary computing platform for many Small, Medium and Large enterprises. And among virtualization providers, VMware is the clear leader in the marketplace today. Its products provide the virtualization platforms of over 400,000 enterprises and companies. It follows that certifications in virtualization, and specifically VMware, are in high demand these days.

The VMware Certified Professional, or VCP, is VMware?s first level of certification centered on the vSphere virtualization platform. The latest version of the VCP is the VCP5.1. The VCP5 and VCP5.1, like all previous versions of the VCP, is focused on evaluating a candidate?s ability to install, configure, and manage VMware?s virtualization platform, including skills like installation of ESXi hosts, use of VMware vCenter Server, networking, security, and configuration of high-availability.

This course includes VMware vSphere: What's New [V5.1] Self-Paced e-Learning at no additional charge. After completing this course, you will be able to implement the new functions and features of VMware vSphere 5.1.
